Continuous innovation to meet a changing market.

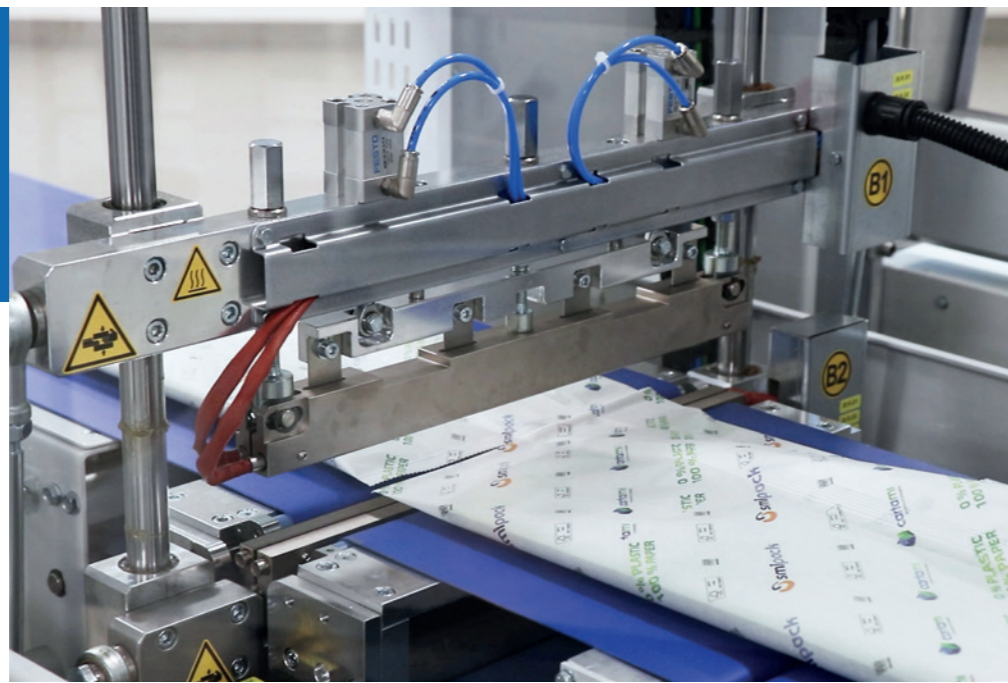

Food and non-food companies, influenced by a strong trend towards product diversification, need very flexible and efficient packaging machines to reach high levels of competitiveness.

Present on the market since 1997, **SMIPACK** (a company part of the SMI Group) is one of the main producers of packaging machines worldwide.

SMIPACK designs and manufactures a **wide range of manual, semi-automatic and automatic packers** that provide thousands of customers all over the world with smart solutions capable of meeting their requirements in terms of competitiveness, production efficiency, operational flexibility, energy saving and ease of use.

Tradition and innovation: the basis of a solid business reality

Year after year, the story of SMIPACK features a sequence of projects and initiatives

combining passion, commitment, research, customer support and above all continuous innovation, factors that have allowed the company to grow in terms of sales turnover, product range, international presence and surfaces occupied.

Today SMIPACK proudly looks back at the year 1997, when it started its activity with the production of L-sealing machines from the S range, that in only two years reached stunning results.

Research and development of new packaging machines still characterize the activity of SMIPACK, which invests significant resources every year to develop new technologies and launch on the market increasingly innovative and competitive products, designed for easy use by the operator and for the optimization of the packaging operations.

FW series for flow pack packaging.

An example of SMIPACK continuous evolution is represented by the flow pack packers from the FW series; an extremely versatile, flexible and cost-saving solution, suitable for any type of food and non-food products.

SMIPACK offers a wide range of flow pack machines, including several models, even for the entry-level sector.

Main advantages of flow pack packers by SMIPACK:

- **high efficiency and production speed:** depending on the model chosen, the FW packers meet production requirements up to 200 products/minute
- **versatility:** products are packed in packs made of simple or coupled flexible material
- **high customization possibilities:** the FW range is equipped with several standard devices which make it the ideal solution for any packaging need, ensuring a great quality/ price ratio
- **compact structure:** machines suitable for any packaging line
- **accessibility and ergonomics:** all models adopt solutions that optimize the man-machine interaction, guaranteeing easy access to any part of the machine and improving performance in terms of ergonomics
- **subsequent easy maintenance**
- **advanced technology:** the FW range adopts cutting-edge solutions that ensure high performance and high safety standards
- **wide operational flexibility:** packers suitable for a wide range of products, even with irregular shapes and small sizes, which arrive at the machine loose (single pack) or grouped (multipack)
- **easy management** even for less expert operators, thanks to the innovative FLXMOD® control system, equipped with an operator interface with PC panel and color touchscreen display

• advanced control system inspired by Industry 4.0 principles

Customer-oriented company

Thanks to the trust of an even higher number of customers and the collaboration with an extensive network of partners, SMIPACK is nowadays well known in the world for the quality of its machines, for the development of innovative packaging technologies and for the constant attention to customers' satisfaction.

Today the installed packers in the world are 87,000. Thanks to an annual production of about 4,000 units, designed and produced in Italy, the company is among the world leaders in its sector and throughout the years has become a reference point for a growing number of companies operating in the food and non-food industries. In an increasingly competitive and demanding market, SMIPACK plays a key role in ensuring its direct presence on the main international markets, in order to offer a high profile, well-organized sales and technical assistance.

A wide range of products to meet the 4.0 Factory

Innovation and advanced technology have always been distinctive elements of the packers produced by SMIPACK, to such an extent to significantly contribute to their huge success on the market thanks to key aspects including process automation, ease of use, operation flexibility and reduced maintenance.

SMIPACK machines are designed to offer all the advantages of IoT (Internet of Things) solutions for data and information exchange through 4.0 Factory supervision and control systems.

In the modern and functional SMIPACK headquarters in San Giovanni Bianco (Bergamo), all design, assembly, sales and after-sales activities are performed.
